

MONOPRINT

Monoprinting is a true multi-media art form. Not only do you have a wide variety of materials to choose from, but you may apply techniques from other mediums. It is a painterly process that may be enhanced by a combination of techniques and materials.

A monoprint is a single print - the image having been transferred from a plate to the paper. The plate may be metal, glass or any surface that will accept the ink, paint or drawing material. The image may be transferred by using a press, a roller or rolling pin, or by hand rubbing.

There are many material to choose from. Etching, relief and lithography inks, oil paints, water colors, acrylics and drawing material such as pastels and oil bar sticks are some of the mediums used. Each material works in its own way and gives the artist a great flexibility. Techniques may be combined with other printmaking processes - embossing, intaglio or relief.

GaleForce Monotype Pinpress is a machined aluminum roller with brass bushings that insures long lasting, trouble-free, precision printmaking. The press comes with the original design rolling pin type handles or with the newer crescent shaped handles.

GRAPHIC WATER SOLUBLE PRINTMAKING INKS

Master Printers have used these inks for years for multi-media, monoprinting and relief.

MONOPRINT

AKUA KOLOR Inks & Applicators

AKUA Kolor is a fluid water-based ink originally developed for monotype but also works well with other techniques such as Japanese woodcut. It can be used right out of the bottle for brushwork or for rolling up thin coats onto monotype plates. By adding Tack Thickener, the consistency will thicken up for heavier applications. AKUA Kolor has a transparent quality which makes it ideal for printing many layers of ink. It prints best on dry paper, cleans up easily with water and is light-fast.

CLAYBORD

CLAYBORD are hardboard panels which are clay covered and may be printed on or used in place of a plate. The surface is an excellent vehicle when doing various types of printmaking such as etching, lithography, monotype, and relief. Instead of using acid, the surface can be etched manually with a scribe or knife. Each print may be individually manipulated or changed for a unique series of "one of a kind" prints. Claybord is strong enough to run through a press but can also be hand printed.
